

SHANK'S® CUSTOM LARGE DOG TABLE TECHNICAL INFORMATION

General Information

This table has been designed to adapt to surgery and/or procedure on either a fully sedated or fully awake animal. The table has a removable vertical side extension that provides restraint of an awake animal. This extension can be removed so that a sedated animal can be placed on the padded table top.

Table Top/Frame

The table top is 24" x 60" in size and is fully padded. The padding is covered with a 3/16" vinyl that is durable enough to hold up to an animal walking on it. The table top has square tube ports so that the vertical side extension can be secured to either side of the table.

The table is comprised out of mild steel. The frame is then hot dip galvanized and covered with acrylic enamel for durability and protection.

Vertical Side Extension

This removable accessory piece can be affixed to either side of the table top. It is 36" tall and the full length of the table top (60"). It is fully padded and has halter ties on the back side.

Hydraulic/Power System

The hydraulic system for the Custom Large Animal Surgery Table consists of a self-contained power unit with a solenoid operated push button station. The pump noise has been reduced to avoid frightening the un-sedated animal.

The table is lifted via one double action cylinder. The hydraulic system is connected via thermoplastic hose and related heavy duty fittings.

The table is rated for 500 lbs.

Operation

The fully lowered height of the table is approximately 10½". The table is capable of raising to a height of 36".
