

SHANK'S® CUSTOM PADDED INDUCTION GATE TECHNICAL INFORMATION

General Information

We custom make a Shank's® Custom Padded Induction Gate that is designed to fold into a recess in the wall, and become part of the padded wall surface. The gate can hinge left hand or right hand. It requires a rough opening of 54" A.F.F. x 78" wide x 4-1/2" deep. The approximate weight of the gate, complete with padding, is 450 lbs.

Gate Frame

The gate dimensions are 4' high x 7' long. The gate is made of square structural tubing and has 14 ga. sheet metal covering on both sides of the gate. The gate steel frame is hot dip galvanized.

Hinges

The hinges that secure the gate to the wall are heavy duty custom hinges which will keep the gate from sagging. The gate is equipped with a spring loaded stainless steel latch to secure the gate in the wall recess. This latch is horizontally mounted, which keeps the gate secure while the horse is recovering in the padded room.

Padding

The exposed face of the gate is covered with Shank's® Adhered Wall Pad. The back side of the gate has one layer of 3/16" vinyl.

Customization

The Gate can be customized in size in accordance to user's specifications.
